

LR2 'V' Type Lead In Cable/Pipe Roller

The V style cable roller leads the cable from the drum into the trench, the design is such that cable is centralised prior to it being fed into the trench. This roller also doubles up as a heavy duty straight line roller or pipe roller and can be positioned in the trench itself. Any width or capacity of V roller can be made on request

- Heavy steel section construction
- Can be used as a lead-in roller, pipe roller or cable roller
